TITLE OF INVENTION

SOMATOSTATIN AND SOMATOSTATIN AGONISTS FOR DECREASING BODY WEIGHT

APPLICANT(S) FOR DO/EO/US

Michael Anthony CAWTHORNE, Yong-Ling LIU, Matthew V. SENNITT

Applicant herewith submits to the United States Designated/Elected Office (DO/EO/US) the following items and other information:

1. ☒ This is a **FIRST** submission of items concerning a filing under 35 U.S.C. 371.
2. ☐ This is a **SECOND** or **SUBSEQUENT** submission of items concerning a filing under 35 U.S.C. 371.
3. ☒ This is an express request to begin national examination procedures (35 U.S.C. 371(f)) at any time rather than delay examination until the expiration of the applicable time limit set in 35 U.S.C. 371(b) and PCT Articles 22 and 39(1).
4. ☒ A proper Demand for International Preliminary Examination was made by the 19th month from the earliest claimed priority date.
5. ☒ A copy of the International Application as filed (35 U.S.C. 371 (c) (2))
 - a. ☒ is transmitted herewith (required only if not transmitted by the International Bureau).
 - b. ☐ has been transmitted by the International Bureau.
 - c. ☐ is not required, as the application was filed in the United States Receiving Office (RO/US).
6. ☐ A translation of the International Application into English (35 U.S.C. 371(c)(2)).
7. ☐ A copy of the International Search Report (PCT/ISA/210).
8. ☒ Amendments to the claims of the International Application under PCT Article 19 (35 U.S.C. 371 (c)(3))
 - a. ☒ are transmitted herewith (required only if not transmitted by the International Bureau).
 - b. ☒ have been transmitted by the International Bureau.
 - c. ☐ have not been made; however, the time limit for making such amendments has NOT expired
 - d. ☐ have not been made and will not be made.
9. ☐ A translation of the amendments to the claims under PCT Article 19 (35 U.S.C. 371(c)(3)).
10. ☐ An oath or declaration of the inventor(s) (35 U.S.C. 371 (c)(4)).
11. ☒ A copy of the International Preliminary Examination Report (PCT/IPEA/409).
12. ☐ A translation of the annexes to the International Preliminary Examination Report under PCT Article 36 (35 U.S.C. 371 (c)(5)).

Items 13 to 18 below concern document(s) or information included:

13. ☒ An Information Disclosure Statement under 37 CFR 1.97 and 1.98.
14. ☐ An assignment document for recording. A separate cover sheet in compliance with 37 CFR 3.28 and 3.31 is included.
15. ☒ A **FIRST** preliminary amendment.
A **SECOND** or **SUBSEQUENT** preliminary amendment.
16. ☐ A substitute specification.
17. ☐ A change of power of attorney and/or address letter.
18. ☒ Certificate of Mailing by Express Mail
19. ☐ Other items or information:

"Express Mail" label number: EL445347119US

Date of Deposit: November 10 1999

I hereby certify that under 37 CFR 1.10 that this correspondence is being deposited with the United States Postal Service as "Express Mail Post Office To Addressee" with sufficient postage on the date indicated above and is addressed to the Assistant Commissioner for Patents, Washington, D.C. 20231.

PRELIMINARY AMENDMENT

Prior to examination, please amend the application as follows:

In the Specification:

Page 1, before the first line, please insert the following paragraph: --This is a continuation of International Patent Application No. PCT/EP98/02999, with an international filing date of 13 May 1998, now pending, which is a continuation of U.S. Patent Application No. 08/854,941, with a filing date of 13 May 1997, now abandoned.--

In the Claims:

Delete claim 37.

REMARKS

The specification is amended to recite claimed benefit under 35 USC 120 from International Patent Application PCT/EP98/02999 and its corresponding US application.

No new matter has been added by the above amendment.

CERTIFICATE OF MAILING BY EXPRESS MAIL

Express Mail Label No. EL445347119US

I hereby certify under 37 CFR §1.10 that this correspondence is being deposited with the United States Postal Service as Express Mail Post Office to Addressee with sufficient postage on the date indicated below and is addressed to the Assistant Commissioner for Patents, Washington, D.C. 20231.

Date of Deposit 10 November 1999

Signature R. Tanenbaum

Typed or Printed Name of Person Signing Certificate

Claims 1-36 are now pending. Prompt examination of the present application, as amended, is respectfully requested.

Please apply any other charges or credits to Deposit Account No. 06-1050.

Respectfully submitted,

Date: 11-9-99

SOMATOSTATIN AND SOMATOSTATIN AGONISTS FOR DECREASING BODY WEIGHT

5 This invention relates to a method and
composition useful for reducing body weight in human or
mammalian animal bodies.

BACKGROUND OF THE INVENTION

10 An estimated 35 million Americans are at least 20%
overweight (Biotechnology 13:1060-1063 (1995)), a level
at which health risks are significantly elevated. Nearly
twice this number of Americans believe themselves to be
overweight. A comparable picture is reported elsewhere.
15 For example, in the United Kingdom, approximately one
third of the women and 43% of the men are overweight,
with at least one in six women and one in eight men
classifiable as medically obese (Purnell, S., Highfield,
The Daily Telegraph, Sept. 30, 1995). There, therefore,
20 are both aesthetic and health reasons for weight control.

 In the medically obese population, the condition
is more severe and often associated with a myriad of
serious medical problems such as non-insulin dependent
diabetes mellitus, hypertension, dyslipidemia, coronary
25 heart disease and musculoskeletal disorders. Thus,
obesity is not just a problem of passive increase in
adipose mass. It has been suggested that the underlying
metabolic alterations in obesity may be amenable to
therapeutic intervention (Goldstein, D.J., et al., Am. J.
30 Clin. Nutr., 60:647-657 (1994)).

SUMMARY OF THE INVENTION

The present invention relates to a method of decreasing body weight in a patient (e.g., a mammal such as a human). The method includes the step of
5 administering a therapeutically effective amount of somatostatin or a somatostatin agonist to said patient. The somatostatin or somatostatin agonist may be administered parenterally, e.g., administered intravenously, subcutaneously, or by implantation of a
10 sustained release formulation. In one embodiment, the patient is obese (e.g., as defined by either 20-25% over normal body weight (Statistical Bulletin, Metropolitan Life Insurance Co., Vol. 40, pg. 1 (1959) or as defined by body mass index (BMI) greater than 25% over normal and
15 including risk factors or a BMI greater than 30% over normal (see, e.g., Bray, GA and Gray, DS, Diabetes/Metabolism Review 4:653-679 (1988); Flynn, et al., Proc. Nutritional Society 50:413 (1991)). In another embodiment, the patient is a non-insulin
20 dependent diabetic (i.e., type-2 diabetic).

The invention also comprises a pharmaceutical or cosmetic composition comprising a somatostatin or a somatostatin agonist. It further comprises the use of such compositions in the preparation of a pharmaceutical
25 or cosmetic composition for the reduction of excessive body weight in a human or mammalian animal.

The term "somatostatin agonist" will be defined below. A therapeutically effective amount depends upon the condition being treated, the route of administration
30 chosen, and the specific activity of the compound used

and ultimately will be decided by the attending physician or veterinarian (e.g., between 5 µg/day to 5 mg/day). In one embodiment, the somatostatin agonist is administered to the patient until the patient has lost the requisite
5 amount of body weight (e.g., the patient is no longer medically obese). In another embodiment, the somatostatin agonist is administered for the lifetime of the patient (e.g., maintaining normal body weight or secondary endpoints). In another embodiment, the
10 somatostatin agonist is administered for cosmetic purposes.

The somatostatin agonist may be injected parenterally, e.g., intravenously, into the bloodstream of the subject being treated. However, it will be
15 readily appreciated by those skilled in the art that the route, such as intravenous, subcutaneous, intramuscular, intraperitoneal, enterally, transdermally, transmucously, sustained released polymer compositions (e.g., a lactic acid polymer or copolymer microparticle or implant),
20 profusion, nasal, oral, etc., will vary with the condition being treated and the activity and bioavailability of the somatostatin agonist being used.

While it is possible for the somatostatin agonist to be administered as the pure or substantially pure
25 compound, it may also be presented as a pharmaceutical formulation or preparation. The formulations to be used in the present invention, for both humans and animals, comprise any of the somatostatin agonists to be described below, together with one or more pharmaceutically

RECTIFIED SHEET (RULE 91)
ISA/EP

acceptable carriers thereof, and optionally other therapeutic ingredients.

The carrier must be "acceptable" in the sense of being compatible with the active ingredient(s) of the formulation (e.g., capable of stabilizing peptides) and not deleterious to the subject to be treated. Desirably, the formulation should not include oxidizing agents or other substances with which peptides are known to be incompatible. For example, somatostatin agonists in the cyclized form (e.g., internal cysteine disulfide bond) are oxidized; thus, the presence of reducing agents as excipients could lead to an opening of the cysteine disulfide bridge. On the other hand, highly oxidative conditions can lead to the formation of cysteine sulfoxide and to the oxidation of tryptophan. Consequently, it is important to carefully select the excipient. pH is another key factor, and it may be necessary to buffer the product under slightly acidic conditions (pH 5 to 6).

The formulations may conveniently be presented in unit dosage form and may be prepared by any of the methods well known in the art of pharmacy. All methods include the step of bringing the active ingredient(s) into association with the carrier which constitutes one or more accessory ingredients.

In general, the formulations for tablets or powders are prepared by uniformly and intimately blending the active ingredient with finely divided solid carriers, and then, if necessary, as in the case of tablets, forming the product into the desired shape and size.

Formulations suitable for parenteral (e.g., intravenous) administration, on the other hand, conveniently comprise sterile aqueous solutions of the active ingredient(s). Preferably, the solutions are isotonic with the blood of the subject to be treated. Such formulations may be conveniently prepared by dissolving solid active ingredient(s) in water to produce an aqueous solution, and rendering said solution sterile. The formulation may be presented in unit or multi-dose containers, for example, sealed ampoules or vials.

Formulations suitable for sustained release parenteral administrations (e.g., biodegradable polymer formulations such as polyesters containing lactic or glycolic acid residues) are also well known in the art. See, e.g., U.S. Patent Nos. 3,773,919 and 4,767,628 and PCT Publication No. WO 94/15587.

The somatostatin or somatostatin agonist may also be administered with other antiobesity agents such as phentermine, diethylpropion, methamphetamine, phendimetrazine, phenmetrazine, diethylpropion, phentermine, mazindol, dextroamphetamine, phentermine, bezphetamine, orlistat, β 3-adrenergic agonists (e.g., BTA-234 and SR58611A), sibutramine, henylpropanolamine, dexfenturamine, leptin, or bromocriptine.

Other features and advantages of the invention will be apparent from the following description of the preferred embodiments and from the claims.

DETAILED DESCRIPTION OF THE INVENTION

- 30 It is believed that one skilled in the art can,
based on the description herein, utilize the present

invention to its fullest extent. The following specific embodiments are, therefore, to be construed as merely illustrative, and not limitative of the remainder of the disclosure in any way whatsoever.

5 Unless defined otherwise, all technical and scientific terms used herein have the same meaning as commonly understood by one of ordinary skill in the art to which this invention belongs. Also, all publications, patent applications, patents, and other references
10 mentioned herein are incorporated by reference.

Somatostatin and its Agonists

Somatostatin (somatotropin release inhibiting factor or SRIF) has both a 14 amino acid isoform
15 (somatostatin-14) and a 28 amino acid isoform (somatostatin-28). See Wilson, J. & Foster, D., *Williams Textbook of Endocrinology*, p. 510 (7th ed., 1985). The compound is an inhibitor of secretion of the growth hormone and was originally isolated from the
20 hypothalamus. Brazeau, et al., *Science* 179:77 (1973). Native somatostatin has a very short duration of effect *in vivo* since it is rapidly inactivated by endo- and exopeptidase. Many novel analogs have been prepared in order to enhance the duration of effect, biological
25 activity, and selectivity (e.g., for the particular somatostatin receptor) of this hormone. Such analogs will be called "somatostatin agonists" herein.

Various somatostatin receptors (SSTRs) have been isolated, e.g., SSTR-1, SSTR-2, SSTR-3, SSTR-4, and SSTR-
30 5. Thus, the somatostatin agonist may be a SSTR-1

agonist, SSTR-2 agonist, SSTR-3 agonist, SSTR-4 agonist or an SSTR-5 agonist. In one embodiment, the somatostatin agonist of the present invention is an SSTR-5 agonist or an SSTR-2 agonist. What is meant by an

5 "SSTR-5 agonist" or an "SSTR-2 agonist" is a compound which (1) has a high affinity (e.g., K_i of less than 1 μ M or, preferably, of less than 10 nM, or less than 2 nM, or of less than 1 nM) for the SSTR-5 or SSTR-2, respectively (e.g., as defined by the receptor binding

10 assay described below), and (2) decreases body weight of a patient (e.g., as defined by the biological assay described below). The somatostatin agonist may also be selective for a particular somatostatin receptor, e.g., have a higher binding affinity for a particular

15 somatostatin receptor subtype as compared to the other receptor subtypes. In one embodiment, the somatostatin receptor is an SSTR-5 selective agonist or SSTR-2 selective agonist. What is meant by an SSTR-5 selective agonist is a somatostatin agonist which (1) has a higher

20 binding affinity (i.e., K_i) for SSTR-5 than for either SSTR-1, SSTR-2, SSTR-3, or SSTR-4 and (2) decreases body weight of a patient (e.g., as defined by the biological assay described below). In one embodiment, the SSTR-5 selective agonist has a K_i for SSTR-5 that is at least 2

25 times (e.g., at least 5 times or at least 10 times) less than its K_i for the SSTR-2 receptor (e.g., as defined by the receptor binding assay described below).

Somatostatin agonists which can be used to practice the therapeutic method of the present invention

30 include, but are not limited to, those covered by

formulae or those specifically recited in the publications set forth below, all of which are hereby incorporated by reference.

Note that for all somatostatin agonists described
10 herein, each amino acid residue represents the structure
of -NH-C(R)H-CO-, in which R is the side chain (e.g., CH₃
for Ala) except for Thr-ol which means -NH-CH(CH(CH₃)OH)-
CH₂-OH and Pro which means prolinyl. Lines between amino
acid residues represent peptide bonds which join the
15 amino acids. Also, where the amino acid residue is
optically active, it is the L-form configuration that is
intended unless D-form is expressly designated. A
disulfide bridge is formed between the two free thiols
(e.g., Cys, Pen, or Bmp residues); however, it is not
20 shown.

Use of linear somatostatin agonists of the
following formula is also within the invention:

wherein

A¹ is a D- or L- isomer of Ala, Leu, Ile, Val,
30 Nle, Thr, Ser, β-Nal, β-Pal, Trp, Phe, 2,4-dichloro-Phe,
pentafluoro-Phe, p-X-Phe, or o-X-Phe, wherein X is CH₃,
Cl, Br, F, OH, OCH₃ or NO₂;

A² is Ala, Leu, Ile, Val, Nle, Phe, β -Nal, pyridyl-Ala, Trp, 2,4-dichloro-Phe, pentafluoro-Phe, o-X-Phe, or p-X-Phe, wherein X is CH₃, Cl, Br, F, OH, OCH₃ or NO₂;

5 A³ is pyridyl-Ala, Trp, Phe, β -Nal, 2,4-dichloro-Phe, pentafluoro-Phe, o-X-Phe, or p-X-Phe, wherein X is CH₃, Cl, Br, F, OH, OCH₃ or NO₂;

A⁶ is Val, Ala, Leu, Ile, Nle, Thr, Abu, or Ser;

A⁷ is Ala, Leu, Ile, Val, Nle, Phe, β -Nal, 10 pyridyl-Ala, Trp, 2,4-dichloro-Phe, pentafluoro-Phe, o-X-Phe, or p-X-Phe, wherein X is CH₃, Cl, Br, F, OH, OCH₃ or NO₂;

A⁸ is a D- or L-isomer of Ala, Leu, Ile, Val, Nle, Thr, Ser, Phe, β -Nal, pyridyl-Ala, Trp, 2,4-dichloro-Phe, 15 pentafluoro-Phe, p-X-Phe, or o-X-Phe, wherein X is CH₃, Cl, Br, F, OH, OCH₃ or NO₂;

each R₁ and R₂, independently, is H, lower acyl or lower alkyl; and R₃ is OH or NH₂; provided that at least one of A¹ and A⁸ and one of A² and A⁷ must be an aromatic amino acid; and further provided that A¹, A², A⁷ and A⁸ 20 cannot all be aromatic amino acids.

Examples of linear agonists to be used in the method of this invention include:

H-D-Phe-p-chloro-Phe-Tyr-D-Trp-Lys-Thr-Phe-Thr-NH₂;
 25 H-D-Phe-p-NO₂-Phe-Tyr-D-Trp-Lys-Val-Phe-Thr-NH₂;
 H-D-Nal-p-chloro-Phe-Tyr-D-Trp-Lys-Val-Phe-Thr-NH₂;
 H-D-Phe-Phe-Phe-D-Trp-Lys-Thr-Phe-Thr-NH₂ (BIM-23052);
 H-D-Phe-Phe-Tyr-D-Trp-Lys-Val-Phe-Thr-NH₂;
 H-D-Phe-p-chloro-Phe-Tyr-D-Trp-Lys-Val-Phe-Thr-NH₂;
 30 and

H-D-Phe-Ala-Tyr-D-Trp-Lys-Val-Ala-β-D-Nal-NH₂.

If desired, one or more chemical moieties, e.g., a sugar derivative, mono or poly-hydroxy C₂₋₁₂ alkyl, mono or poly-hydroxy C₂₋₁₂ acyl groups, or a piperazine derivative, can be attached to the somatostatin agonist, e.g., to the N-terminus amino acid. See PCT Application WO 88/02756, European Application 0 329 295, and PCT Application No. WO 94/04752. An example of a somatostatin agonists which contain N-terminal chemical substitutions are:

Synthesis of somatostatin agonists

The methods for synthesizing somatostatin agonists is well documented and are within the ability of a person of ordinary skill in the art.

Synthesis of short amino acid sequences is well established in the peptide art. For example, synthesis of H-D-Phe-Phe-Phe-D-Trp-Lys-Thr-Phe-Thr-NH₂, described above, can be achieved by following the protocol set forth in Example I of European Patent Application 0 395 417 A1. The synthesis of somatostatin agonists with a substituted N-terminus can be achieved, for example, by following the protocol set forth in WO 88/02756, European Patent Application No. 0 329 295, and PCT Publication No. WO 94/04752.

Somatostatin Receptor Binding Assays

The human SSTR-1, SSTR-2, SSTR-3, SSTR-4, and SSTR-5 cDNA clones have been described (SSTR-1 and SSTR-2 in Yamada, Y., et al., Proc. Natl. Acad. Sci. USA, 89:251-255 (1992); SSTR-3 in Yamada, et al., Mol. Endocrinol. 6:2136-2142 (1993); and SSTR-4 and SSTR-5 in Yamada, et al., Biochem. Biophys. Res. Commun. 195:844-852 (1993)) and are also available from American Type Culture Collection (ATCC, Rockville, MD) (ATCC Nos. 79044 (SSTR-1), 79046 (SSTR-2), and 79048 (SSTR-3)). Based on the restriction endonuclease maps, the entire coding region of each SSTR cDNA may be excised by suitable restriction endonuclease digestion (Maniatis, T., et al., *Molecular Cloning - A Laboratory Manual*, CSHL, 1982). Restriction endonucleases are available from New England Biolabs (Beverly, MA). This cDNA fragment was inserted into the mammalian expression vector, pCMV (Russell, D., et al., J. Biol. Chem., 264:8222-8229 (1989)), using standard molecular biology techniques (see e.g.,

Maniatis, T., et al., Molecular Cloning, -A Laboratory Manual, Cold Spring Harbor Laboratory, 1982) to produce the expression plasmid, pCMV-human SSTR-1 through pCMV-human SSTR-5. Other mammalian expression vectors include
5 pcDNA1/Amp (Invitrogen, Sandlesy, CA). The expression plasmids were introduced into the suitable bacterial host, E. Coli HB101 (Stratagene, La Jolla, CA) and plasmid DNAs, for transfection, were prepared on Cesium Chloride gradients.

10 CHO-K1 (ovary, Chinese hamster) cells were obtained from ATCC (ATCC No. CCL 61). The cells were grown and maintained in Ham's F12 media (Gibco BRL, Grand Island, NY) supplemented with 10% fetal bovine serum under standard tissue culture conditions. For
15 transfection, the cells were seeded at a density 1×10^6 /60-cm plate (Baxter Scientific Products, McGaw Park, IL.). DNA mediated transfection was carried out using the calcium phosphate co-precipitation method (Ausubel, F.M., et al., Current Protocols in Molecular Biology, John Wiley & Sons, 1987). The plasmid pRSV-neo (ATCC; ATCC No. 37198) was included as a selectable marker at
20 1/10 the concentration of the expression plasmid. CHO-K1 clonal cell lines that have stably inherited the transfected DNA were selected for growth in Ham's F12 media containing 10% fetal bovine serum and 0.5mg/ml of
25 G418 (Sigma). The cells were ring-cloned and expanded in the same media for analysis.

Expression of the human SSTR-1 through SSTR-5 receptors in the CHO-K1 cells were detected by Northern
30 blot analysis of total RNA prepared from the cells

(Sambrook, J.E., et al., Molecular Cloning - A Laboratory Manual, Ed. 2., Cold Spring Harbor Laboratory, Cold Spring Harbor, NY, 1989) and by receptor binding using [¹²⁵I-Tyr¹¹]somatostatin-14 as a ligand. Transfected cell
5 lines expressing the human SSTR receptors were clonally expanded in culture and used in the following SSTR binding protocol.

Crude membranes were prepared by homogenization of the transfected cells in 20 ml of ice-cold 50 mM Tris-HCl
10 with a POLYTRON homogenizer (setting 6, 15 sec). Buffer was added to obtain a final volume of 40 ml, and the homogenate was centrifuged in a Sorval SS-34 rotor at 39,000 g for 10 min at 0-4°C. The resulting supernatant was decanted and discarded. The pellet was rehomogenized
15 in ice-cold buffer, diluted, and centrifuged as before. The final pellet was resuspended in the 10 mM Tris HCl and held on ice for the receptor binding assay.

Aliquots of the membrane preparation were
20 incubated for 30 min at 30°C with 0.05 nM [¹²⁵I-Tyr¹¹]somatostatin-14 (2000 Ci/mmol; Amersham Corp., Arlington Heights, IL) in 50 mM HEPES (pH 7.4) containing a test somatostatin agonist of various concentrations (e.g., 10⁻¹¹ to 10⁻⁶), 10 mg/ml bovine serum albumin
25 (fraction V) (Sigma Chemical Co., St. Louis, MO), MgCl₂ (5 mM), Trasylol (200 KIU ml), bacitracin (0.02 mg/ml), and phenylmethanesulphonyl fluoride (0.02 mg/ml). The final assay volume was 0.3 ml. The incubations were terminated by rapid filtration through GF/C filters (pre-soaked in
30 0.3% polyethylenimine for 30 min) using a Brandel

filtration manifold. Each tube and filter were then washed three times with 5 ml aliquots of ice-cold buffer.

Specific binding was defined as the total [125 I]-Tyr¹¹]SRIF-14 bound minus that bound in the presence of

5 1000 nM. The K_i values for the tested somatostatin agonists were calculated by using the following formula:

$K_i = IC_{50} / [1 + (LC/LEC)]$ where IC_{50} is the concentration of test somatostatin agonist required to inhibit 50 percent of the specific binding of the radioligand [125 I]-

10 Tyr¹¹]somatostatin-14, LC is the concentration of the radioligand (0.05 nM), and LEC is the equilibrium dissociation constant of the radioligand (0.16 nM). The K_i values (nM) for the tested somatostatin agonists are shown in Table I.

TABLE I

	hSSTR-1	hSSTR-2	hSSTR-3	hSSTR-4	hSSTR-5

Weight Loss Studies

The effect of chronic (6 day) treatment with BIM-23268 on body weight gain/loss was examined in an obese animal model, the fatty (fa/fa) Zucker rats (purchased from Harlan-Olac, Bicester, Oxon, U.K. See Bray, G., Federation Proceedings 36:148-153 (1977). Eleven male fatty Zucker rats weighing about 450 grams were randomly divided into two groups, and their initial body weights recorded. The animals were housed in pairs in a normal 12 hour light:12 hour darkness cycle at $20 \pm 2^\circ\text{C}$ and fed overnight *ad libitum*.

For the group assigned to receive drug treatment, the rats received the type-5 somatostatin receptor selective agonist BIM-23268C at 3 mg/kg, by subcutaneous injection twice a day at 10:00 a.m. and 5:00 p.m. The other group was treated with a subcutaneous injection of 0.1 ml/100 g of saline twice a day at 10:00 a.m. and 5:00 p.m. The animals were subjected to the BIM-23268 or saline treatment for a total of six days.

At 10:00 a.m. each day, food was removed and replaced with accurately weight 100 gram food pellet (a standard laboratory rat diet, Beekay rat and mouse diet, Bantin & Kingman, Hull, Humberside, U.K.). The amount of food remaining a 10:00 a.m. the next day was accurately weighed, recorded and replaced with 100 grams of fresh food pellets.

The animals were weighed each day during the 6-day treatment period at 5:00 p.m. The untreated control group mean weight was 414.09 at the start of the trial

and was 418.89 after six days. The BIM-23268 treated group's mean weight was 413.6 at the start of the trial and remained at 413.6 after six days. The average food consumption for the control group was 26.0 g/rat/day and
5 for the BIM-26268 group was 25.9 g/rat/day.

These results showed that body weight gain was lower in animals treated with BIM-23268. The effect on body weight change was not due to a toxic effect of the agent, as the treated group appeared healthy, and there
10 was no difference in the amount of food consumed over the entire treatment period.

Secondary Endpoints of Efficacy

Because of the amount of weight that must be lost
15 to achieve a clinically important alteration in risk for various sequelae of obesity, the Food and Drug Administration guidelines for the evaluation of weight-control drugs have recommended that additional endpoints showing a decrease in risk factors such as lipemia be
20 monitored.

Obese (fa/fa) Zucker rats were treated as in example 1 above. On the last day of treatment (day 6), food was removed at 5:00 p.m., and the rats were fasted overnight. At 9:00 a.m. the next day, the animals were
25 subjected to a glucose challenge, given as 0.8 gram/kg of glucose orally. Periodic 400 µl of blood samples were taken from the tail vein (Peterson, R.G., ILAR News, 32:16-19 (1990)) 60 min. and 30 min. before and at 30, 60, 90, and 120 min. after the administration of the
30 glucose challenge (0.8 gram/kg orally). Aprotinin

(Traysylol, Bayer UK, Hayward's Health, W. Sussex, U.K.) and heparin (Sigma Chemical Co., Poole, Dorset, U.K.) were added to the blood samples to a final concentration of 400 KIU/ml and 100 units/ml, respectively. Plasma fractions were prepared from these samples by centrifugation at 4000 x G in a microfuge, for the estimation of triglycerides and glycerol. Samples were then stored at -80°C until assayed.

Plasma glycerol and triglycerides were determined using the Sigma Enzymatic (Tinder) calorimetric assay kit (Cat #337-B, Sigma Chemical Co., Poole, Dorset, U.K.) and measuring absorbance at 540 nm in a spectrophotometer.

After six days of treatment with BIM-23268C at 3 mg/kg twice a day by subcutaneous injection, both plasma glycerol and triglycerides were significantly lowered, as exemplified by the samples taken at tim 30 and 60 minutes before the oral glucose challenge. See Fig. 1 and Fig. 2. The administration of an oral glucose challenge have no significant effect on plasma lipids. The BIM-23628C treated group showed a significantly lower plasma glycerol and triglycerides throughout the 2-hour test period. The results suggested that BIM-23268C, following a 6-day treatment period at the prescribed dose was effective in reducing hypertriglyceridemia.

Assessment of Efficacy in Patient

The effect of the somatostatin agonist on obesity can be examined in patients by assessing total body weight, body mass index, total adipose tissue content, subcutaneous tissue content, visceral adipose tissue

content (see, e.g., Zamboni, M., Amer. J. Clin. Nutr. 60:682-687 (1994). The effect of the somatostatin agonist can also be measured on other secondary endpoints, such as insulin sensitivity (see, e.g.,

5 Bergman, R.N., et al., Endocrin. Rev. 6:45-86 (1985); Turner, R.C., Diabetes 44:1-10 (1995)), blood pressure (see, e.g., Maheux, P., Hypertension 24:695-698 (1994)), plasma lipids (see, e.g., Dubrey, S.W., et al., Diabetes 43:831-835 (1994)), and the other acceptable endpoints

10 recommended by the FDA Draft Guidelines for the Clinical Evaluation of Weight Control Drugs (1994) (see also, Drug & Market Development 6:36 (1994)).

OTHER EMBODIMENTS

15 The foregoing description has been limited to specific embodiments of this invention. It will be apparent, however, that variations and modifications may be made to the invention, with the attainment of some or all of the advantages of the invention. Such embodiments

20 are also within the scope of the following claims.

CLAIMS

1. A method of decreasing body weight in a patient, said method comprising administering a therapeutically effective amount of somatostatin or a somatostatin agonist to said patient.
2. A method of claim 1, wherein said method comprises administering a therapeutically effective amount of a somatostatin agonist to said patient.
3. A method of claim 2, wherein said somatostatin agonist is a somatostatin type-2 receptor agonist.
4. A method of claim 2, wherein said somatostatin agonist is a somatostatin type-5 receptor agonist.
5. A method of claim 3, wherein said somatostatin type-2 receptor agonist has a K_i of less than 2 nM for the somatostatin type-2 receptor.
6. A method of claim 4, wherein said somatostatin type-5 receptor agonist has a K_i of less than 2 nM for the somatostatin type-5 receptor.
7. A method of claim 2, wherein said somatostatin agonist is a somatostatin type-2 receptor selective agonist.
8. A method of claim 2, wherein said somatostatin agonist is a somatostatin type-5 receptor selective agonist.
9. A method of claim 7, wherein said somatostatin type-2 receptor selective agonist has a K_i for the somatostatin type-2 receptor that is at least 10 times less than the K_i for the somatostatin type-1, type-3, type-4, and type-5 receptors.

10. A method of claim 8, wherein said somatostatin type-5 receptor selective agonist has a K_i for the somatostatin type-5 receptor that is at least 10 times less than the K_i for the somatostatin type-1, type-2, type-3, and type-4 receptors.

11. A method of decreasing body weight in a patient, said method comprising administering a therapeutically effective amount of H-Cys-Phe-Phe-D-Trp-Lys-Thr-Phe-Cys-NH₂, wherein a disulfide bond exists between the free thiols of two Cys residues.

12. A method of claim 1, wherein said patient is an non-insulin-dependent diabetic human.

13. A method of claim 2, wherein said patient is an non-insulin-dependent diabetic human.

14. A method of claim 3, wherein said patient is an non-insulin-dependent diabetic human.

15. 15. A method of claim 4, wherein said patient is an non-insulin-dependent diabetic human.

16. A method of claim 5, wherein said patient is an non-insulin-dependent diabetic human.

17. A method of claim 6, wherein said patient is an non-insulin-dependent diabetic human.

18. A method of claim 7, wherein said patient is an non-insulin-dependent diabetic human.

19. A method of claim 8, wherein said patient is an non-insulin-dependent diabetic human.

20. A method of claim 9, wherein said patient is an non-insulin-dependent diabetic human.

21. A method of claim 10, wherein said patient is an non-insulin-dependent diabetic human.

22. A method of claim 11, wherein said patient is an non-insulin-dependent diabetic human.

23. A method according to claim 1 wherein the somatostatin agonist is

- 5 H-D- β -Nal-Cys-Tyr-D-Trp-Lys-Thr-Cys-Thr-NH₂,
H-D-Phe-Cys-Phe-D-Trp-Lys-Thr-Cys- β -Nal-NH₂,
H-D-Phe-Cys-Tyr-D-Trp-Lys-Thr-Cys- β -Nal-NH₂,

H-Cys-Phe-Tyr(I)-D-Trp-Lys-Thr-Phe-Cys-NH₂ .

24. A method according to claim 1 wherein the
10 somatostatin agonist is

15 wherein

A¹ is a D- or L- isomer of Ala, Leu, Ile, Val, Nle, Thr, Ser, β-Nal, β-Pal, Trp, Phe, 2,4-dichloro-Phe, pentafluoro-Phe, p-X-Phe, or o-X-Phe, wherein X is CH₃,
20 Cl, Br, F, OH, OCH₃ or NO₂;

A² is Ala, Leu, Ile, Val, Nle, Phe, β-Nal, pyridyl-Ala, Trp, 2,4-dichloro-Phe, pentafluoro-Phe, o-X-Phe, or p-X-Phe, wherein X is CH₃, Cl, Br, F, OH, OCH₃ or NO₂;

25 A³ is pyridyl-Ala, Trp, Phe, β-Nal, 2,4-dichloro-Phe, pentafluoro-Phe, o-X-Phe, or p-X-Phe, wherein X is CH₃, Cl, Br, F, OH, OCH₃ or NO₂;

A⁶ is Val, Ala, Leu, Ile, Nle, Thr, Abu, or Ser;

A⁷ is Ala, Leu, Ile, Val, Nle, Phe, β-Nal,
30 pyridyl-Ala, Trp, 2,4-dichloro-Phe, pentafluoro-Phe, o-X-Phe, or p-X-Phe, wherein X is CH₃, Cl, Br, F, OH, OCH₃ or NO₂;

A⁸ is a D- or L-isomer of Ala, Leu, Ile, Val, Nle, Thr, Ser, Phe, β-Nal, pyridyl-Ala, Trp, 2,4-dichloro-Phe, pentafluoro-Phe, p-X-Phe, or o-X-Phe, wherein X is CH₃, Cl, Br, F, OH, OCH₃ or NO₂;

5 each R₁ and R₂, independently, is H, lower acyl or lower alkyl; and R₃ is OH or NH₂; provided that at least one of A¹ and A⁸ and one of A² and A⁷ must be an aromatic amino acid; and further provided that A¹, A², A⁷ and A⁸ cannot all be aromatic amino acids.

10 25. A method according to claim 24 wherein the linear somatostatin agonist is

H-D-Phe-p-chloro-Phe-Tyr-D-Trp-Lys-Thr-Phe-Thr-NH₂,

H-D-Phe-p-NO₂-Phe-Tyr-D-Trp-Lys-Val-Phe-Thr-NH₂,

H-D-Nal-p-chloro-Phe-Tyr-D-Trp-Lys-Val-Phe-Thr-NH₂,

15 H-D-Phe-Phe-Phe-D-Trp-Lys-Thr-Phe-Thr-NH₂,

H-D-Phe-Phe-Tyr-D-Trp-Lys-Val-Phe-Thr-NH₂,

H-D-Phe-p-chloro-Phe-Tyr-D-Trp-Lys-Val-Phe-Thr-NH₂ or

H-D-Phe-Ala-Tyr-D-Trp-Lys-Val-Ala-β-D-Nal-NH₂.

20 26. A method according to claim 1 wherein the somatostatin agonist is

25

Article 34

34

or

5

27. A method according to claim 1 wherein said patient is obese.

10 28. A method according to claim 3 wherein said patient is obese.

29. A method according to claim 4 wherein said patient is obese.

15 30. A method according to claim 7 wherein said patient is obese.

31. A method according to claim 8 wherein said patient is obese.

32. A method according to claim 11 wherein said patient is obese.

20 33. A pharmaceutical or cosmetic composition comprising a therapeutically or cosmetically effective amount of somatostatin; or a somatostatin agonist; or H-Cys-Phe-Phe-D-Trp-Lys-Thr-Phe-Cys-NH₂ wherein a disulfide bond exists between the free thiols of the two
 25 Cys residues.

34. A pharmaceutical composition as claimed in claim 33 having the features identified in any one of claims 3 to 10 and 23 to 26.

AMENDED SHEET

35. Use of a somatostatin, or a somatostatin agonist; or H-Cys-Phe-Phe-D-Trp-Lys-Thr-Phe-Cys-NH₂ wherein a disulfide bond exists between the free thiols of the two Cys residues, in the formulation of a
 5 pharmaceutical or cosmetic composition for use in reducing excessive body weight in a human or mammalian animal.

36. Use of a somatostatin, or a somatostatin agonist according to claim 35, wherein said somatostatin
 10 or somatostatin agonist has the relevant features identified in any one of claims 3 to 10 and 23 to 26.

37. A pharmaceutical composition substantially as hereinbefore described with reference to the Examples.

Declaration and Power of Attorney For Patent Application

English Language Declaration

As a below named inventor, I hereby declare that:

My residence, post office address and citizenship are as stated below next to my name,

I believe I am the original, first and sole inventor (if only one name is listed below) or an original, first and joint inventor (if plural names are listed below) of the subject matter which is claimed and for which a patent is sought on the invention entitled

SOMATOSTATIN AND SOMATOSTATIN AGONISTS FOR DECREASING BODY WEIGHT

the specification of which

(check one)

☐ is attached hereto.

☒ was filed on November 10, 1999 as United States Application No. or PCT International Application Number PCT/EP98/02999

and was amended on _____

(if applicable)

I hereby state that I have reviewed and understand the contents of the above identified specification, including the claims, as amended by any amendment referred to above.

I acknowledge the duty to disclose to the United States Patent and Trademark Office all information known to me to be material to patentability as defined in Title 37, Code of Federal Regulations, Section 1.56.

I hereby claim foreign priority benefits under Title 35, United States Code, Section 119(a)-(d) or Section 365(b) of any foreign application(s) for patent or inventor's certificate, or Section 365(a) of any PCT International application which designated at least one country other than the United States, listed below and have also identified below, by checking the box, any foreign application for patent or inventor's certificate or PCT International application having a filing date before that of the application on which priority is claimed.
